

# Business Website

Choose a business or create a fictitious business to build a full-featured website for in Sinatra.

Partner up with somebody else from the class. Groups of 3 are alright but please limit your group to a maximum of 3 participants.

## Before you Start Coding

- Spend time with your groupmates sketching out the website on paper and possibly in an online wireframing tool - before you start doing any coding, have your plans approved by your instructor
- Before starting to code, create a very basic Git repo with a README.md file and push it to GitHub
- Add your partners as collaborators in this repo
- File all of the major and minor tasks as issues against this repo and assign them to a group member
- Use collaborative software development best practices to complete this project

## Site requirements:

- At least 4 separate pages
- Use photographs
- Use jQuery and JavaScript for interaction
- Should have the option to contact the business using the Mandrill API to send an e-mail to the business owner
- Feel free to get *incredibly* creative!
